Docket No. 59474.21780 Application No. 10/763,032 Customer No. 30734

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings of claims in the application:

1-2. (Cancelled)

- 3. (Currently Amended) The surgical clip according to claim [[2]] 4, wherein said gusset divides said recess in the mouth of said hook so as to form a bifurcated recess.
- 4. (Currently Amended) The surgical clip according to claim 2, A surgical clip with an interlocking latch mechanism, comprising:

a first leg and a second leg, each of said legs having an inner vessel-clamping surface and an outer surface, said inner surfaces being positioned in opposition to each other;

a flexible hinge section integrally disposed between and joining the proximal ends of said first and second legs; and

a female locking member positioned on the distal end of said first leg and comprising a resilient inwardly turned hook defining a recess in a mouth of said hook, and a male locking member positioned on the distal end of said second leg comprising at least one detent extending therefrom, said female and male locking members being formed whereby when said first and second leg members are moved from an open position to a closed position about said hinge section, said resilient hook of said female locking member is urged open to receive the detent of said male locking member in the recess thereof so as to removably lock said first and second leg members of said surgical clip in said closed position; and further comprising a gusset within the mouth of said hook,

wherein the at least one detent extending outwardly from said male locking member comprises two spaced-apart detents each having an inwardly turned lip extending generally toward said flexible hinge section for lockingly engaging said recess in the mouth of said hook.

5-8. (Cancelled)

Docket No. 59474.21780

Application No. 10/763,032

Customer No. 30734

9. (Currently Amended) The surgical clip according to claim [[2]] 4, wherein at least one of said inner surfaces of said clip comprises a plurality of protrusions extending from said inner surface for providing improved vessel retention during and

following closure of said clip.

10. (Original) The surgical clip of claim 9, wherein both of said inner surfaces of said

clip comprise said plurality of protrusions.

11. (Currently Amended) The surgical clip according to claim [[2]] 4, wherein said

hinge section has a continuous concave inner surface and a continuous convex

outer surface.

12-13. (Cancelled)

14. (Currently Amended) The surgical clip of claim [[12]] 4, wherein said inner surface

of said first leg has a concave radius of curvature between said hinge section and its

distal end, said outer surface of said first leg has a convex radius of curvature

between said hinge section and its distal end, said inner surface of said second leg

has a convex radius of curvature between said hinge section and its distal end, and

said outer surface of said second leg has a concave radius of curvature between said

hinge section and its distal end.

15. (Currently Amended) The surgical clip of claim [[12]] 4, further comprising a pair of

bosses joined to opposite sides of said first leg between said hinge section and the

distal end of said first leg, and a pair of bosses joined to opposite sides of said second

leg at the distal end of said second leg.

16. (Original) The surgical clip of 15, wherein a portion of said pair of bosses joined to

said first leg extend beyond said outer surface of said first leg to form a bridge section.

17. (Original) The surgical clip of claim 15, wherein said pair of bosses on said second

leg each have a sharp tissue-penetrating tooth extending therefrom toward said first

leg.

18-20. (Cancelled)
